Catheter ablation of electrical storm in patients with structural heart

January 1st, 2019 - Catheter ablation is effective in suppressing of ES in patients with structural heart disease and in selected cases it may represent a life saving therapy. Therefore it should be applied early in the course of ES to prevent adverse haemodynamical consequences of repeated arrhythmias. In long term CA prevents recurrences of any VT in almost half of the treated population. The patients with very low LVEF, dilated LV, renal insufficiency and recurrent ES despite the ablation are at high

Modifying Ventricular Fibrillation by Targeted Rotor Substrate Ablation

January 4th, 2017 - Introduction. Ventricular fibrillation (VF) remains an important public health problem, accounting for significant morbidity and mortality. 1 The implantable cardioverter defibrillator (ICD) is the cornerstone of current therapy for this life-threatening arrhythmia, applied either in high-risk patients 2 or VF survivors 3. While effective defibrillation results in anxiety, depression 4 and increases the risk of death in patients receiving such therapy 5.
